

1 **Supplementary material**

2 **Appendix S1.** Output of the distance based multivariate analysis (DISTLM) performed to test the
3 statistical significance of the regression of γ - versus α - and β -diversity when the effect of water
4 depth, treated as a covariate, is excluded from the model. In the regression analyses, all tests were
5 based on Euclidean distances calculated among observations from untransformed data. The
6 following abbreviations are used: degrees of freedom (df), sum of squares (SS), and mean squares
7 (MS).

8

	df	SS	MS
Covariables	1	254.6	
Regression	2	1770.0	885.0
Residual	14	1035.7	74.0
Total	17	3060.3	

pseudo-F	11.9634
permutation P	0.0007
Proportion of variation explained	0.5784
