Subsequent to the publication of the above-mentioned paper, we discovered two incorrect formulas in the Method section:

In Sect. 2.4.1 the correct text and equations are as follows:

For reservoirs,  $k$  was calculated from wind speed and water temperature (Crusius and Wanninkhof, 2003):

$$k = [0.168 + (0.228 \times U_{10}^{2.2})] \times \left( \frac{SC_{CO_2}}{600} \right)^{-0.5} \quad (2)$$

Equation (4) should be the following:

$$SC_{CO_2} = 1911.1 - (118.11 \times T) + (3.4527 \times T^2) - (0.04132 \times T^3) \quad (4)$$

All of the results have been calculated with these correct formulas and thus, are not affected by these errors.
