**Figure S1.** Comparison of effect sizes between the methods of carbonate chemistry manipulation in experiments with *Emiliana huxleyi*. White diamonds symbolize treatments where total alkalinity [TA] was kept constant while dissolved inorganic carbon [DIC] changed. Black diamonds symbolize treatments where DIC was kept constant and TA varied. The number of experiments included in the meta-analysis is shown in parentheses. The mean effect size is significant when the 95% confidence interval does not overlap zero [\*].
