Figure S1: Detailed view of the water intake (WI on Figure 1).

Figure S2 : Skewness of the resampled 15-days log concentration time series for the 9 stations

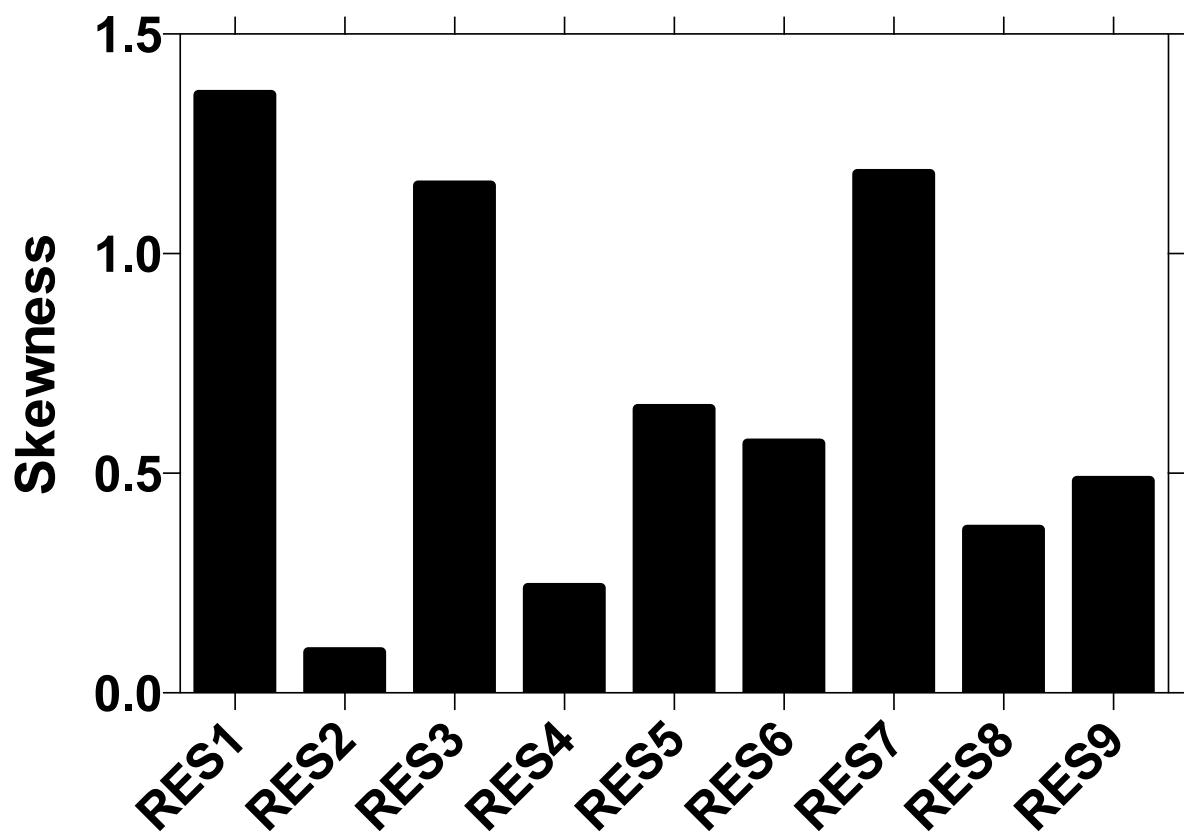

Figure S3 : Time series of (a) surface CH<sub>4</sub> concentrations ( $\mu\text{mol L}^{-1}$ ) and (b) diffusive fluxes ( $\text{mmol m}^{-2} \text{d}^{-1}$ ) at the stations RES1 to RES8 in the Nam Theun 2 Reservoir. On panel (b), warm dry season is in red, warm wet season in grey and cool dry season in blue)

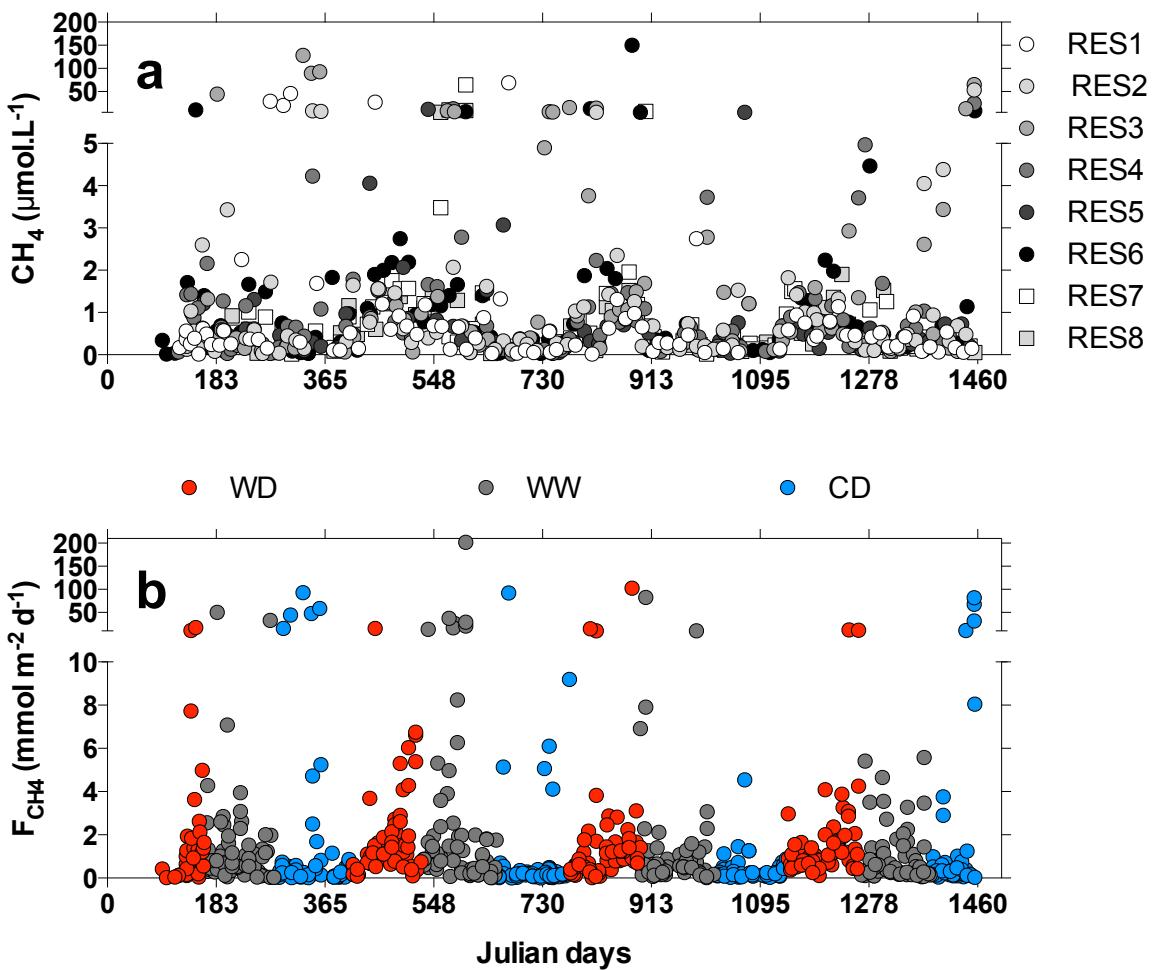

Figure S4 : Auto-correlation functions of the resampled 15-days log concentration for the 9 stations.
