Supplemental Figure 1. High resolution MS analysis of 64PE406-E1 core depth 46 – 47 cm. (a) Base peak chromatogram, (b) combined extracted ion currents (within 3 ppm) of protonated, ammoniated, and sodiated adducts (m/z 547.472 + 564.499 + 569.454, respectively) of non-derivatised BHT and BHT isomer, (c) averaged orbitrap HRMS2 ($n = 6$) of the BHT isomer ammoniated adduct ($[M+NH_4]^+$; m/z 564.499).
