Figure S1: Correlation between measured log-transformed CO<sub>2</sub> concentrations (μM) and surface water pH using a generalised additive model. Model deviance explained was 86.3%.

The response pattern shown is the partial effect splines from the GAM and shaded area indicated 95% credible intervals.

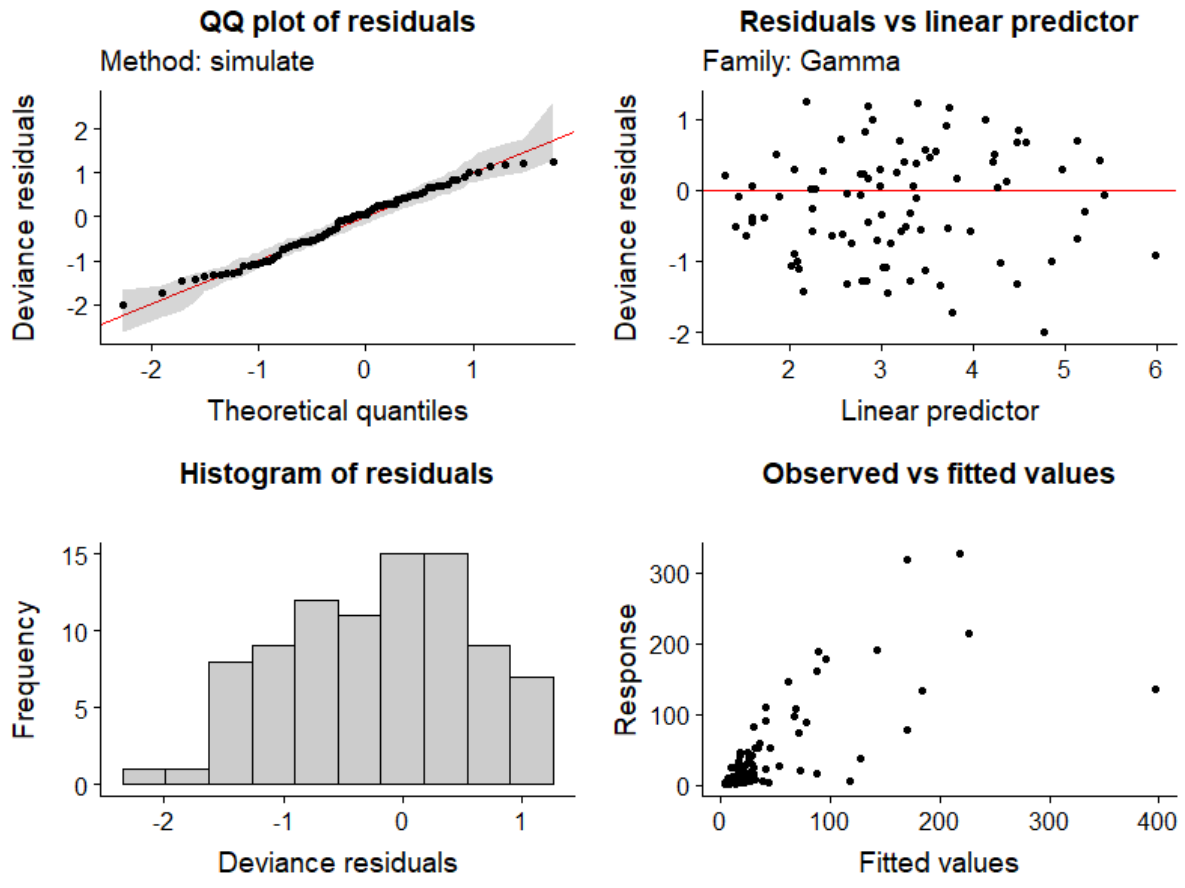

Fig. S2: R output of diagnostic plots for carbon dioxide model

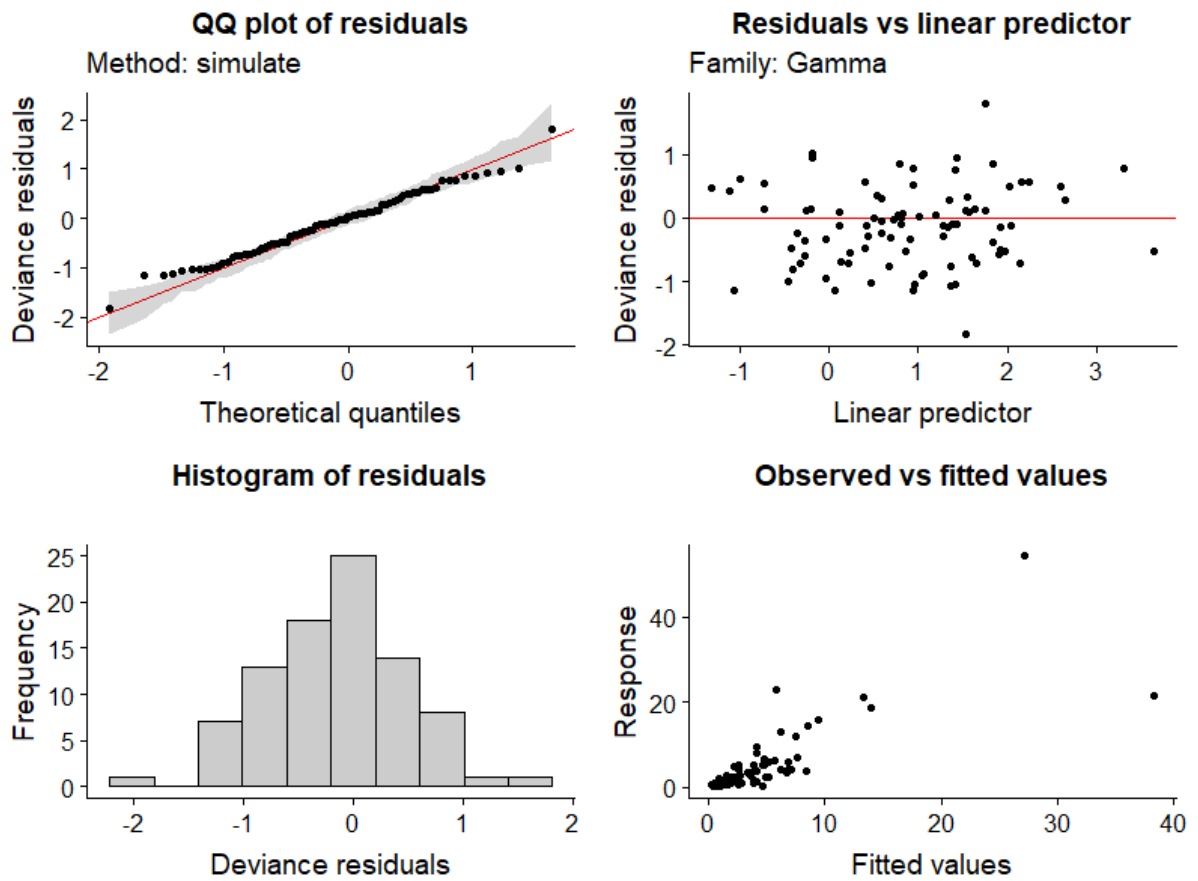

Fig. S3: R output of diagnostic plots for methane model

**Fig. S4: Scatterplot matrices of covariate data used in the CO<sub>2</sub> model showing distribution and correlation pairs**

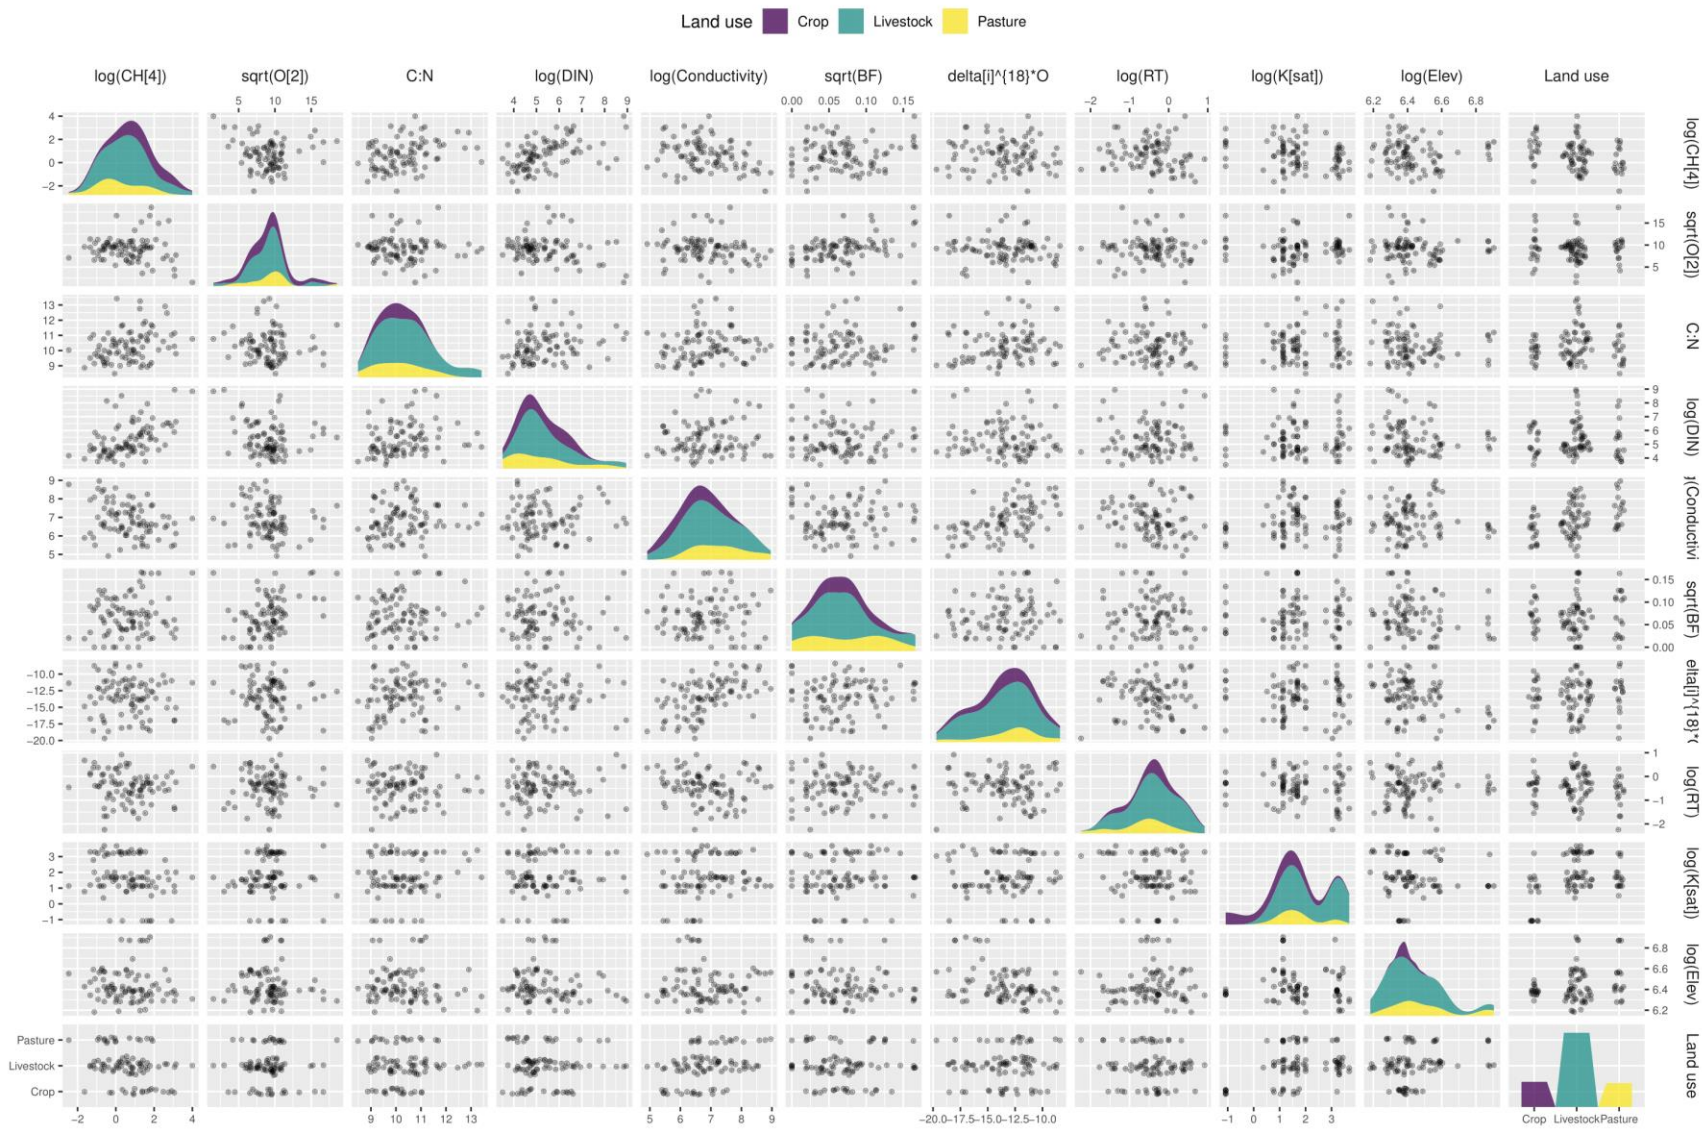

Fig S5. Scatterplot matrices of covariate data used in the CH<sub>4</sub> model showing distribution and correlation pairs.

**Table S1: Spearman correlation matrix of biotic and abiotic factors with log-transformed CO<sub>2</sub> and CH<sub>4</sub> concentrations. Variables included total nitrogen (TN), chlorophyll *a* (Chla), alkalinity (Alk), sediment C/N ratio (SedCNorg), total phosphorus (TP), dissolved organic carbon (DOC), Nitrate-nitrite (NOx), conductivity (Cond), and dissolved oxygen (DO).**

Row	<i>logCO2</i>	<i>logCH4</i>	<i>logTN</i>	<i>logChla</i>	<i>logAlk</i>	<i>SedCNorg</i>	<i>logTP</i>	<i>logDOC</i>	<i>logNOx</i>	<i>logCond</i>	<i>sqrtDO</i>
