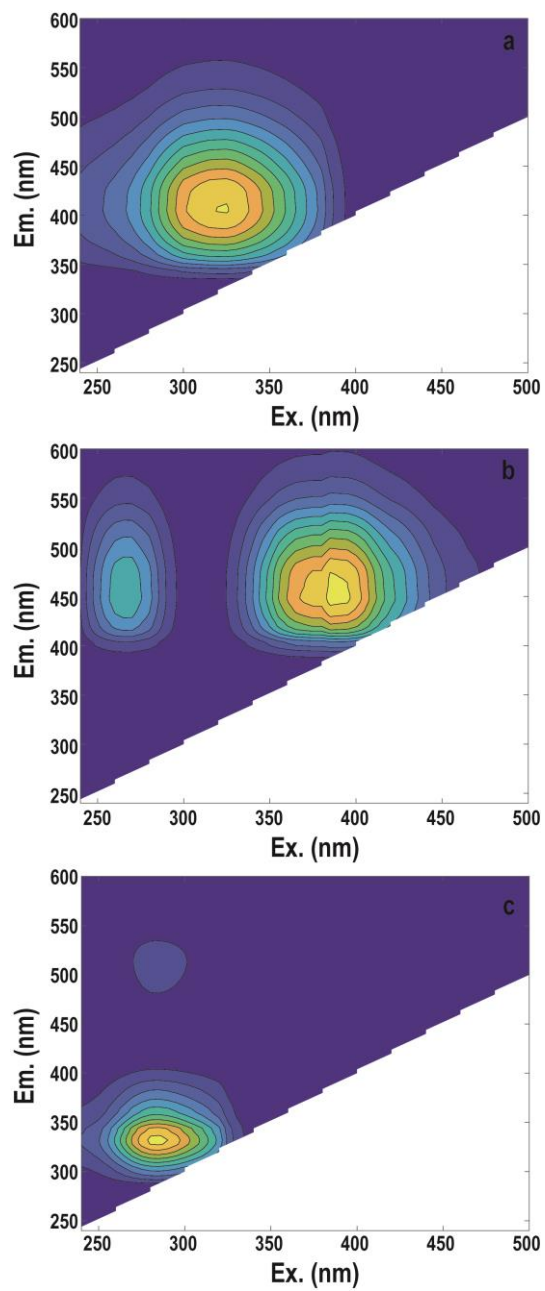

Figure S1. EEM contour plots of the three component a) component 1 (FDOM_H, Ex/Em = 322/405 nm), b) component 2 (FDOM_M, Ex/Em = 386/450 nm), and c) component 3 (FDOM_P, Ex/Em = 280/330 nm) identified by PARAFAC analysis in Masan Bay..

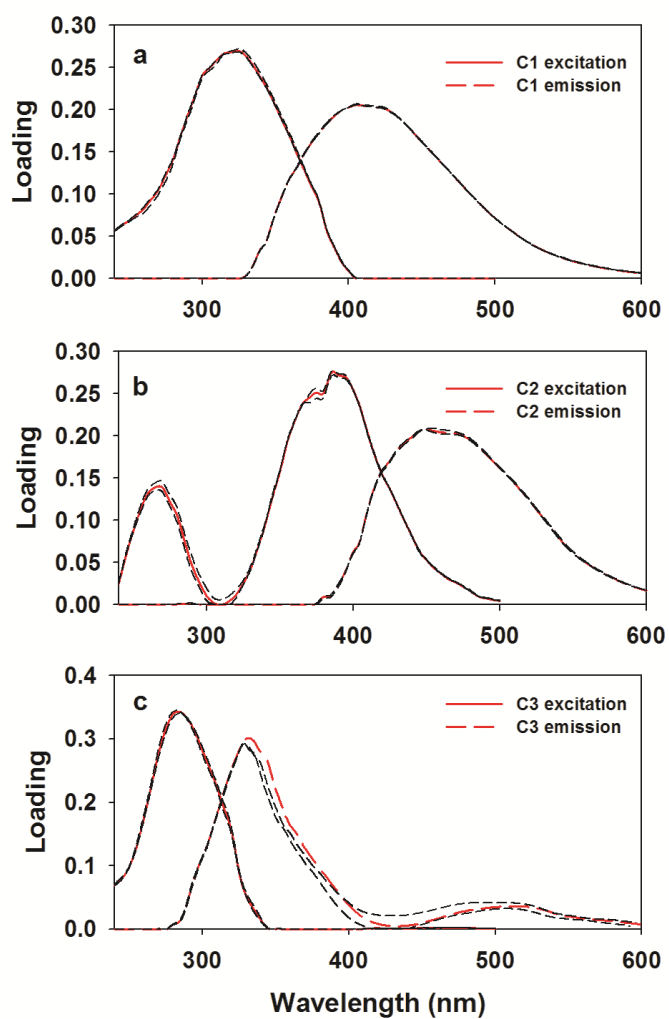

Figure S2. Split-half validation results for three components in the Masan Bay. Excitation (red solid line) and emission (red dashed line) spectra are shown.
