**Figure S1.** Species distribution models of endemic *Cypria petenensis*, *Paracythereis opesta* and non-endemic *Cytheridella ilosvayi*, *Darwinula stevensoni*. Models are based on downscaled and calibrated climatic information of the MIROC-GSM climatic model for the period of ~22 and ~6 ka BP. Models performance were assessed with true skill statistic (TSS) and area under the receiver operating curve (ROC).

Table S2. Pearson correlation analysis of 19 bioclimatic variables of the Northern Neotropical region.
