During submission the wrong Fig. 4 was provided. The legend name of two categories was switched. The correct Fig. 4 is as follows:

**Figure 4.** Boxplot of soil potential respiration (SPR) rates and SOC temperature sensitivity  $(Q_{10})$ . The \* signifies differences in SPR or  $Q_{10}$  between the buried and non-buried soil layers (P < 0.05). Identification of buried soil layers is based on the depth profile of SOC concentration and soil chemical weathering degree with support from the stretch map in Fig. 1 (see details in S1 in the Supplement).
