1 **Tables**

2 Table S1: One-way ANOVA results (p-values) comparing measured percent coral and algae cover  
 3 between triplicate transects within each Lagoon site (Lagoon site 1, Lagoon site 2). Data were pooled  
 4 among replicate point-contact survey efforts ( $n = 2 \text{ transect}^{-1}$ ). A **bolded** value (p-value < 0.05)  
 5 indicates that the percent cover significantly differed between transects within each Lagoon site.

<b>Point-Contact Survey Method</b>				
<b>Cover</b>	<b>Lagoon site 1</b>		<b>Lagoon site 2</b>	
	<b>df</b>	<b>p-value</b>	<b>df</b>	<b>p-value</b>
% Coral Cover	2	0.791	2	0.959
% Algae Cover	2	0.256	2	0.214
% Sediment Cover	2	0.421	2	0.956

6

7

8 Table S2: One-way ANOVA results (p-values) comparing measured percent coral and algae cover  
 9 between Lagoon site 1 and Lagoon site 2. Data were pooled among replicate point-contact survey  
 10 efforts and triplicate transects within each Lagoon site ( $n = 6 \text{ site}^{-1}$ ). A **bolded** value (p-value < 0.05)  
 11 indicates that the percent cover significantly differed between Lagoon sites.

<b>Point-Contact Survey Method</b>		
<b>Cover</b>	<b>df</b>	<b>p - value</b>
% Coral Cover	<b>1</b>	<b>0.001</b>
% Algae Cover	<b>1</b>	<b>0.011</b>
% Sediment Cover	1	0.122

Table S8: List of invertebrate taxonomy described in section 3.2.4.

Group	Taxon	Common name
Algae	<i>Caulerpa</i> spp.	
	Chlorophyta spp.	Green algae
	<i>Halimeda</i> spp.	
	<i>Laurencia</i> spp.	
	<i>Padina</i> sp.	

	Rhodophyta spp.	Red algae
	<i>Valonia ventricosa</i>	Sailor's eyeball alga
Corals	<i>Acropora secale</i>	
	<i>Acropora millepora</i>	
	<i>Acropora muricata</i>	
	<i>Acropora</i> spp.	Staghorn corals
	<i>Astrea curta</i>	
	<i>Cyphastrea chalcidicum</i>	
	<i>Dipsastraea</i> sp.	
	<i>Favites halicora</i>	
	<i>Favites rotundata</i>	
	<i>Goniastrea edwardsi</i>	Honeycomb coral
	<i>Goniopora</i> sp.	Flowerpot coral
	<i>Isopora palifera</i>	
	<i>Cladiella</i> sp.	
	<i>Lobophyllia agaricia</i>	
	<i>Montipora digitata</i>	
	<i>Montipora grisea</i>	
	<i>Montipora hispida</i>	
	<i>Montipora</i> sp.	
	<i>Platygyra daedalea</i>	Lesser valley coral
	<i>Platygyra</i> spp.	
	<i>Pocillopora damicornis</i>	
	<i>Pocillopora</i> sp.	Cauliflower coral
	<i>Porites attenuate</i>	
	<i>Porites cylindrica</i>	Yellow finger coral
	<i>Porites</i> sp.	Pore coral
	<i>Sarcophyton</i> spp.	Toadstool leather corals
	<i>Stylophora pistillata</i>	Hood coral
Crustaceans	Alpheidae sp.	Snapping shrimp
	<i>Alpheus</i> sp.	Snapping shrimp

	Brachyura spp.	Crabs
	<i>Calcinus latens</i>	Hidden hermit crab
	Caridea sp.	Caridean shrimp
	<i>Clibanarius corallinus</i>	Coral hermit crab
	<i>Dardanus megistos</i>	White-spotted hermit crab
	Majidae sp.	Spider crab
	Stomatopoda spp.	Mantis shrimps
	<i>Thalamita</i> sp.	
	<i>Trapezia serenei</i>	Coral crab
	<i>Zenopontonia soror</i>	Seastar shrimp
Echinoderms	<i>Culcita novaeguineae</i>	Pillow cushion star
	<i>Holothuria atra</i>	Lollyfish sea cucumber
	<i>Holothuria edulis</i>	Pinkfish sea cucumber
	<i>Holothuria leucospilota</i>	Black sea cucumber
	<i>Holothuria</i> sp.	
	<i>Linckia guildingi</i>	Guilding's sea star
	<i>Linckia laevigata</i>	Blue linckia
	<i>Nardoa novaecaledoniae</i>	Yellow mesh sea star
	<i>Stichopus herrmanni</i>	Herrmann's sea cucumber
	<i>Stichopus chloronotus</i>	Greenfish sea cucumber
Molluscs	<i>Aplysia argus</i>	White-speckled seahare
	<i>Atactodea striata</i>	Striate beach clam
	<i>Codakia paytenorum</i>	Payten's codakia
	<i>Chrysostoma paradoxum</i>	Orange-mouthed top shell
	<i>Clypeomorus bifasciata</i>	Double-banded creeper
	<i>Coralliophila</i> sp.	
	Ergalataxinae	
	<i>Gymnodoris</i> sp.	
	<i>Melo amphora</i>	Giant baler
	<i>Pitar</i> sp.	
	<i>Spondylus</i> sp.	Thorny oyster

	<i>Tectus fenestratus</i>	Latticed top shell
	<i>Tonna chinensis</i>	China tun
	<i>Tridacna maxima</i>	Small giant clam
	<i>Tubulophilinopsis gardineri</i>	Gardiner's headshield slug
	<i>Turbo argyrostomus</i>	Silvermouth turban
Polychaetes	<i>Perinereis</i> sp.	
	<i>Spirobranchus</i> sp.	Christmas tree worm
	Terebellidae sp.	Spaghetti worm
Sponges	Porifera sp.	

62 Table S9: Shapiro-Wilk test for normality in reef metabolism. Data are organized by rates of NEP and  
63 NEC measured at Lagoon site 1, Lagoon site 2, and the larger lagoon area (Slack Water). Data for each  
64 Lagoon site were pooled among triplicate parallel transects. NEP data were not included for the slack-  
65 water method. If the significant value (Sig.) of the test is > 0.05 the data exhibit a normal distribution.

		Shapiro-Wilk		
	Site	Statistic	df	Sig.
NEP	Lagoon site 1	.951	36	.112
	Lagoon site 2	.984	36	.857
	Slack Water			
NEC	Lagoon site 1	.967	36	.356
	Lagoon site 2	.952	36	.117
	Slack Water	.962	33	.287

66

70

71

72 Table S10: One-way ANOVA results (p-values) comparing measured reef metabolism (NEP and NEC)  
73 between triplicate transects within each Lagoon site (Lagoon site 1, Lagoon site 2, and Slack Water).  
74 Data were pooled among all 11 (Slack water) and 12 (Lagoon site 1 and Lagoon site 2) days of  
75 measurements (3 days for Night NEC). A **bolded** value (p-value < 0.05) indicates that the measured  
76 response in that specific metabolic parameter significantly differed between triplicate transects.

Metabolism	Lagoon site 1		Lagoon site 2		Slack Water	
	df	p-value	df	p-value	df	p-value
NEP	2	.471	2	.917		
NEC	2	.169	2	.489	2	.581
Night NEC					2	.617

77

78

79

80

81 Table S11: One-way ANOVA results (p-values) comparing measured reef metabolism (NEP and NEC)  
82 between measurement days within each Lagoon site (Lagoon site 1 and Lagoon site 2 = 12; Slack  
83 Water = 11; Night NEC = 3). Data were pooled among all triplicate transects. A **bolded** value (p-value  
84 < 0.05) indicates that the measured response in that specific metabolic parameter significantly differed  
85 between triplicate transects.

Metabolism	Lagoon site 1		Lagoon site 2		Slack Water	
	df	p-value	df	p-value	df	p-value
NEP	11	.181	11	.099		
NEC	11	.506	11	.365	10	.073
Night NEC					2	.083

86

87 Table S12: One-way ANOVA results for NEP compared amongst Lagoon site 1 and Lagoon site 2 and  
 88 for NEC compared amongst Lagoon site 1, Lagoon site 2, and Slack Water. Data were pooled among  
 89 all triplicate transects and measurements days. Tukey HSD post-hoc test results are displayed for NEC  
 90 (n = 3). A **bolded** value (p-value < 0.05) indicates that the difference was significant between Lagoon  
 91 sites.

Metabolism		df	F-value	p - value
NEP		1	3.47	.067
NEC		<b>2</b>	<b>8.17</b>	<b>.001</b>
