The reference section of the article contained an error in the citation of Zscheischler et al. (2014), cited in the last paragraph of Sect. 3.1.

“This is contrary to the results of Zscheischler et al. (2014), who found a strengthening of positive (net ecosystem production, NEP) extremes over time using CMIP5 Earth system models (ESMs). However, the ratio of negative to positive carbon cycle extremes in our study lies within the multi-model spread of the relative strength of NEP extremes in CMIP5 ESMs (Zscheischler et al., 2014).”

The correct reference for Zscheischler et al. (2014) can be found below.
