Depth (cm)

Legend:

- Haynesina germanica* (blue)
- Ammonia confertitesta* (orange)

The plot displays individual test area data for two foraminiferal species across various depth intervals. The x-axis represents the test area in mm², ranging from 0 to 0.24. The y-axis represents depth in centimeters, with intervals from 0.2-0.4 to 3.8-4.0. *Haynesina germanica* (blue) is present in most intervals, while *Ammonia confertitesta* (orange) is present in intervals from 1.6-1.8 cm to 2.4-2.6 cm. A dashed horizontal line is drawn at the 2.8-3.0 cm depth interval.
