Table S2 Location of the data points

Variable	Data type	Location
Sea surface temperature (SST)	Satellite data	HOR: 77.000°N 15.325°E; 77.000°N 15.375°E; 77.000°N 15.425°E
Sea ice concentration (SIC)		HOR: 76.950°N 16.225°E; 76.950°N 16.275°E; 76.950°N 16.325°E
Suspended particulate matter (SPM), sedimentation flux (SF), salinity	Field data	M5 (H1_11): 77.017°N 15.636°E M4 (H1_09): 77.012°N 15.629°E M3 (H1_08): 77.009°N 15.624°E M2 (H1_06): 77.003°N 15.624°E M1 (H1_04): 70.000°N 15.623°E
Air temperature (AT) and precipitation		PPS (Polish Polar Station Hornsund): 77.000°N 15.550°E

Table S3 List of state variables

N	Abbr.	Definition	Initial value	Unit
1	F	Flagellates	0.1	mgC·m ⁻³
2	D	Diatoms	0.1	mgC·m ⁻³
3	Chl _F	Chlorophyll a for flagellates (prognostic state variable)	0.005	mgC·m ⁻³
4	Chl _D	Chlorophyll a for diatoms (prognostic state variable)	0.005	mgC·m ⁻³
5	Z _S	Microzooplankton	0.01	mgC·m ⁻³
6	Z _L	Mesozooplankton	0.01	mgC·m ⁻³
7	MB	Macrobenthos	0.5	mgC·m ⁻³
8	iSPM	Inorganic Suspended Particulate Matter	0.0	mg·m ⁻³
9	D ₁	Fast sinking detritus	0.0	mgC·m ⁻³
10	D ₂	Slow sinking detritus	0.1	mgC·m ⁻³
11	DOM	Dissolved Organic Matter	3.0	mgC·m ⁻³
12	NH ₄	Ammonium	50.0	mmolN·m ⁻³
13	NO ₃	Nitrate	1035.0	mmolN·m ⁻³
14	PO ₄	Phosphate	1100.0	mmolP·m ⁻³
15	SiO ₂	Silicate	300.0	mmolSi·m ⁻³
16	Opal	Biogenic Opal	2.0	mmolSi·m ⁻³
17	O ₂	Oxygen	85.0	ml·l ⁻¹
18	S _{CN}	Sediment Carbon Nitrogen	0.0	mg·m ⁻³
19	S _P	Sediment Phosphate	0.0	mgC·m ⁻³
21	S _S	Sediment Silicate	0.0	mgC·m ⁻³
22	S _{iSPM}	Sediment iSPM	0.0	mgC·m ⁻³

Table S4 The Spearman's correlation between results of simulations (station 2 in 2006 and 2009) and field studies (stations M4 and M5 in 2019) plotted in Sup. Fig. 3.

Station (year)	M4 (2019)	M5 (2019)
2 (2006)	Rho = 0.74, p<0.001	Rho = 0.77, p<0.001
2 (2009)	Rho = 0.75, p<0.001	Rho = 0.79, p<0.001

Table S5 Literature data for model assessment in the West Spitsbergen fjords: KGF – Kongsfjorden, HOR – Hornsund, ISF – Isfjorden, Rij - Rijpfjorden

Variable	KGF	HOR	ISF	RIJ	Reference
Silicate [$\mu\text{mol}\cdot\text{l}^{-1}$]	1.9 - 6.0	1.0 - 6.0			Hegseth and Tverberg 2013;
Nitrates [$\mu\text{mol}\cdot\text{l}^{-1}$]	<0.67	<1.96			Węsławski et al. 1988;
Phosphates [$\mu\text{mol}\cdot\text{l}^{-1}$]	0.83	0.3			Hodal et al. 2012
Ice algae [$\text{mgC}\cdot\text{m}^{-2}$]				50 – 450	Eilertsen et al. 1989;
Phytoplankton [$\text{gC}\cdot\text{m}^{-2}$]	0.254 – 2.77	0.608 - 2.1		<0.002	Węsławski et al. 1988;
Zooplankton [$\text{gC}\cdot\text{m}^{-2}$]			1-6		Hodal et al. 2012;
				6-8	Zajączkowski et al., 2010
Macrobenthos [$\text{gC}\cdot\text{m}^{-2}$]	4.8 – 7.73	6.44 – 20.48		2.31 – 8.34	Błachowiak-Samołyk et al., 2015
Summer pelagic primary production [$\text{mgC}\cdot\text{m}^{-2}\cdot\text{day}^{-1}$]	59 - 108 80 - 155	173 - 1333			Włodarska-Kowalcuk et al., 2019
Spring pelagic primary production [$\text{mgC}\cdot\text{m}^{-2}\cdot\text{day}^{-1}$]	405 - 445 30 - 1850	320 - 2770			Iversen and Seuthe, 2011
Zoobenthos production [$\text{gC}\cdot\text{m}^{-2}\cdot\text{y}^{-1}$]	9.4 2.1 – 6.6	19.2 1.2 – 2.6			Hodal et al., 2012
Burial rate of OC [$\text{gC}\cdot\text{m}^{-2}\cdot\text{y}^{-1}$]	28 ± 6 9 - 13 5.7-10.0 15	28 ± 1 19.3-30.3 38			Vonnahme et al., 2021
					Włodarska-Kowalcuk et al., 2019
					Zaborska et al., 2018 (only macro.)
					Kuliński et al., 2014
					Koziorowska et al., 2018
					Zaborska et al., 2018

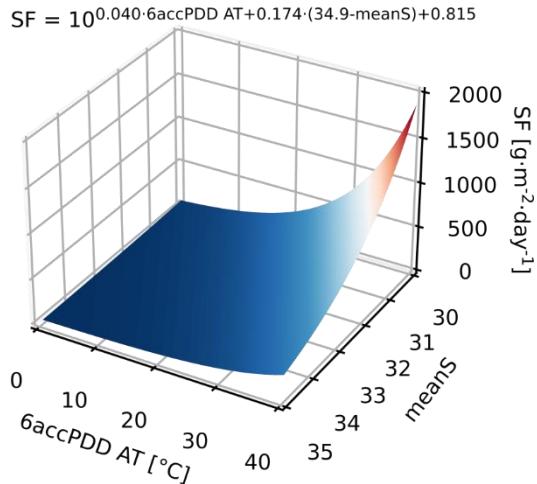

Figure S1 Inorganic sediment flux as a function of 6accPDD AT and mean salinity. 6accPDD is the accumulated daily temperature for positive degree days for 6 days window ($^{\circ}\text{C}$), 34.9 is a reference salinity for Atlantic Water (Moskalik et al., 2018), and meanS is the mean salinity above the sediment trap.

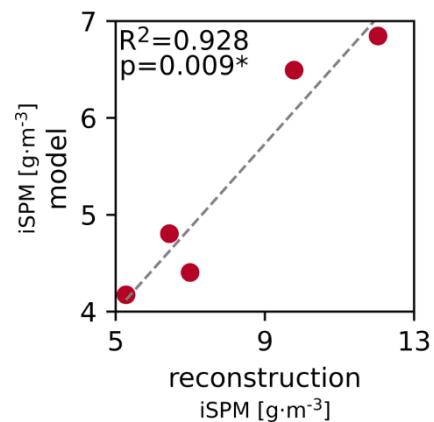

Figure S2 Assessment of inorganic SPM (iSPM) simulations at station HH1 (2): correlation of mean summer-time integrated iSPM concentration from reconstruction and model for 2005-2009 ($\text{g} \cdot \text{m}^{-3}$).

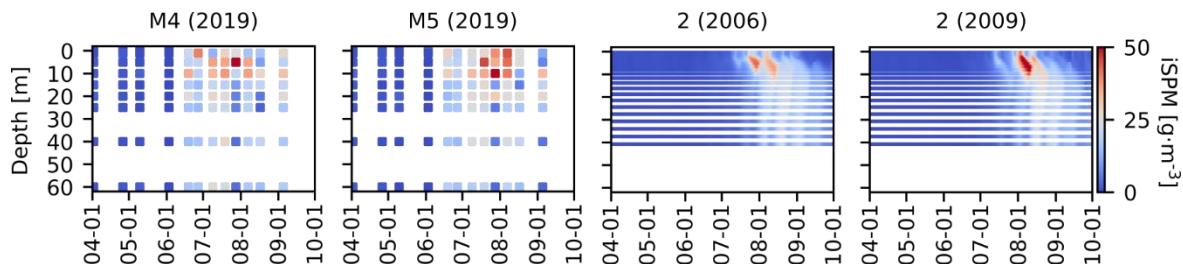

Figure S3 Inorganic SPM concentration (iSPM, $\text{g} \cdot \text{m}^{-3}$) at monitoring stations (M4 and M5) in 2019 and at modelled station (2) in 2006 and 2009.

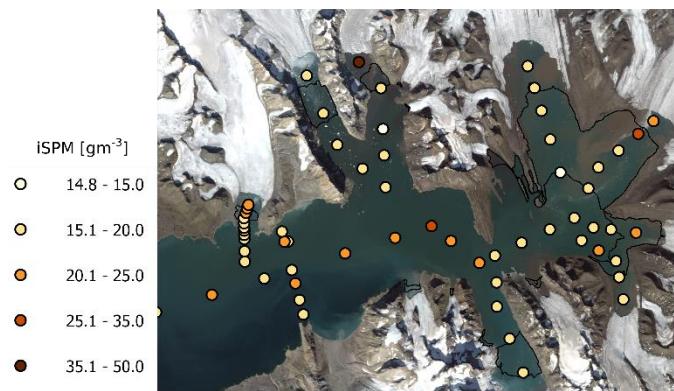

Figure S4 Spatial distribution of inorganic SPM (iSPM) concentrations in Hornsund in summer 2017 (late July-early August, 0 m). The black lines indicate newly ice-free areas extent in 2006. Landsat8 satellite image (04/08/2020) downloaded from <https://glovis.usgs.gov/app>.

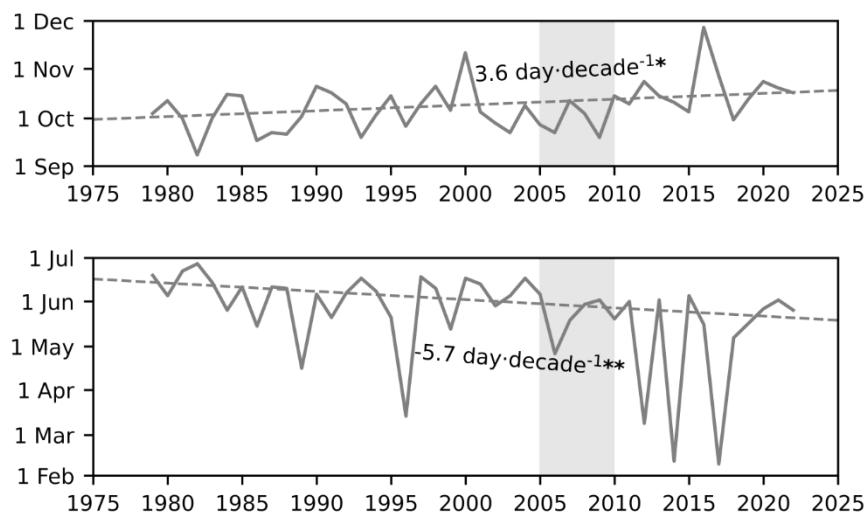

Figure S5 The trends in the start and end of the melt season in Hornsund defined as the start of the first six consecutive days when daily average air temperatures exceed or fall below 0°C, respectively. * $p < 0.05$, ** $p < 0.001$ for Modified Mann Kendall Test.

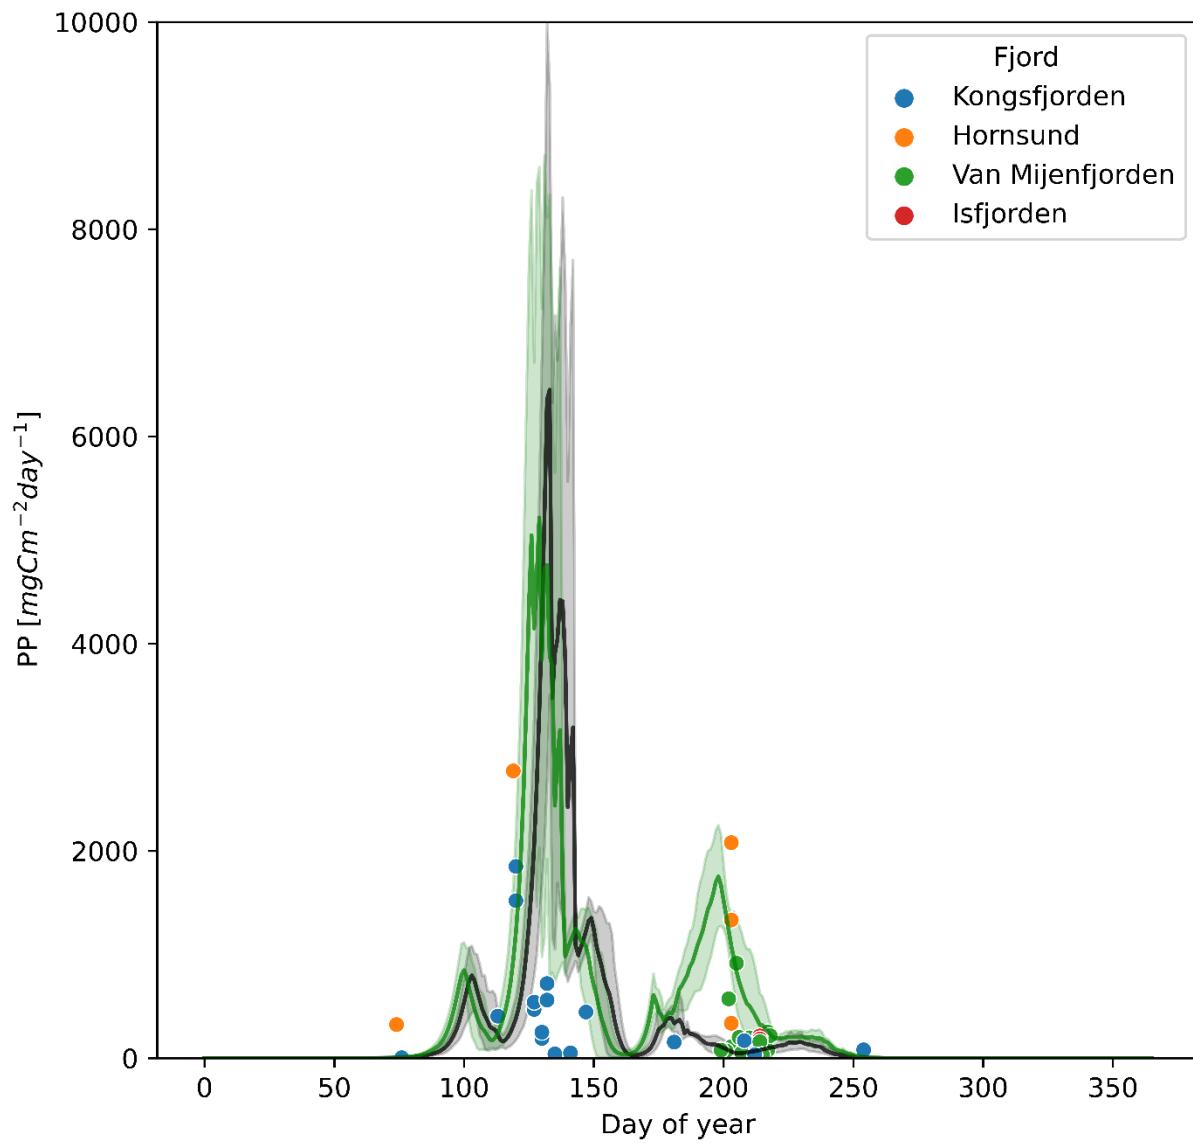

Figure S6 Comparison of pelagic primary production from the modeling (station H3, black - iSPM scenario, green - noSPM scenario; average for 2005-2009 with standard deviation) and field studies as reported by Hodal et al., 2012 (Kongsfjorden), Iversen and Seuthe 2011 (Kongsfjorden), Piwoz et al., 2009 (Kongsfjorden and Hornsund), Eilertsen et al., 1989 (Kongsfjorden, Isfjorden, Van Mijenfjorden and Hornsund).

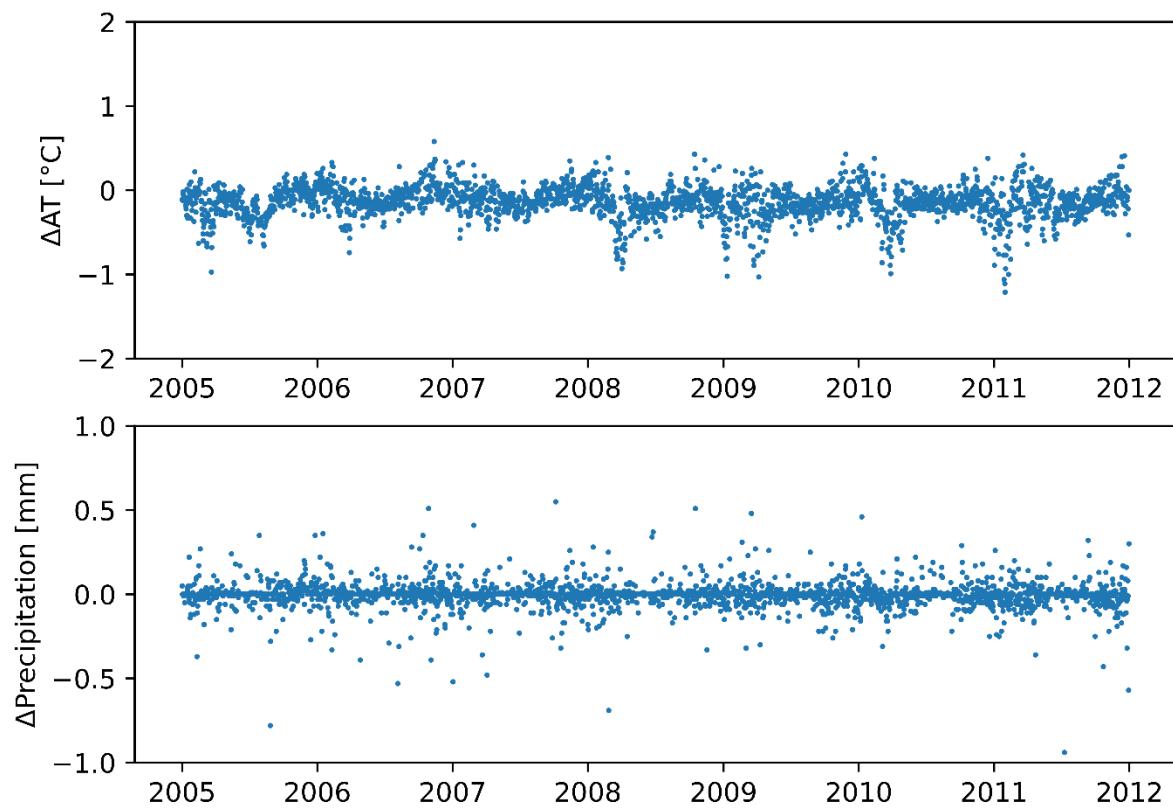

Figure S7 The differences in daily average air temperature (AT), and daily precipitation between the inner and outer fjord based on ERA-interim reanalysis (Dee et al., 2011).
