Interactive comment on “Assessing the relationship between the $\delta^{18}\text{O}$ signatures of siliceous sponge spicules and water in a tropical lacustrine environment (Minas Gerais, Brazil)” by M. C. Matteuzzo et al.

Anonymous Referee #1

Received and published: 1 October 2013

The review consists of two files: - one .pdf file with a summary of the research question addressed and the contribution of the work. This is followed by general comments on the paper and detailed comments for each section/subsection. - one .pdf file of the manuscript with annotated notes. Both .pdf files were combined into one due to the review submission form of BG.
