

Interactive comment on “Old carbon contributes to aquatic emissions of carbon dioxide in the Amazon” by L. E. Vihermaa et al.

Anonymous Referee #1

Received and published: 26 February 2014

It was a pleasure to read this manuscript. It is an important contribution to our knowledge of the carbon cycling in the Amazon basin and is in good agreement with the findings of Mayorga et al. (2005). It also points to the importance of further research on the sources of evaded CO₂ from rivers and streams in the region.
