After reviewing the three comments received for BGD ms# bg-2014-50 by Karstensen et al. I would like to encourage the authors to re-submit their ms in a modified version: While two referees had no (#1) or only minor points (#2) to be addressed, significant major concerns have been raised by the anonymous referee #3. The critical question about the missing 'sense of the paper' as raised by ref #3 should be carefully addressed in the author's reply and a revised version of the ms.
