Received and published: 28 May 2014

The replies to the reviewers comments have been uploaded as a pdf file. The revised manuscript with all the graphs has also been uploaded as a pdf, as has the new supplementary figure.

Figure caption for supplementary figure: Supplementary figure 1: Evolution of total bacterial abundance (cells m^{-1}) and primary production ($\text{mmol C m}^{-3} \text{ d}^{-1}$) in five bioassay experiments across three time points for all $p\text{CO}_2$ treatments. Legend shows the colours and symbols used to denote the different $p\text{CO}_2$ treatments. Bacterial abundance was measured using flow cytometry (Zubkov et al., 2001). Primary
