Interactive comment on “Evaluation of carbon stocks in above- and below-ground biomass in Central Africa: case study of Lesio-louna tropical rainforest of Congo” by X. Liu

C. Publications

publications@copernicus.org

Received and published: 24 July 2014

During typesetting an incorrect caption was inserted for Fig. 7. The correct caption is:

Fig. 7. Comparison of the average of above- and below-ground biomass of 21 plots and the plot1 of study site **(b)**. Carbon of aboveground biomass (tCha^{-1}) in Lesio-louna forest by grouped bar chart with error bars **(a)**. In this figure **(a)** there is the regression in plot1. Distribution of Carbon stocks of above ground biomass by plot in the study area **(a)**. This figure **(a)** indicated that the carbon stock is higher in the plot10 that is $363.899 \text{ tCha}^{-1}$ about Aboveground biomass. In this study, the plot16 with $\text{AGB} = 51.012 \text{ tCha}^{-1}$ and $\text{BGB} = 10.457 \text{ tCha}^{-1}$ is lower compared to others study
