

Interactive comment on “Atmospheric inversion of the surface carbon flux with consideration of the spatial distributions of US crop production and consumption” by J. M. Chen et al.

J. M. Chen et al.

chenj@geog.utoronto.ca

Received and published: 27 July 2014

Many thanks for your careful examination of our manuscript and many useful suggestions. We agree that our manuscript can be much improved by (1) conducting a set of sensitivity tests for a comprehensive evaluation of the influence of the prior flux on the inverted results, and (2) comparing our results with more previous studies on the same topic and doing in-depth analysis of our inversion results with other independent information.

We will provide a comprehensive point-to-point answer to your questions and suggestions when we submit the revised version of our manuscript.
