We appreciate that the Reviewer provides more details on the previous comments, but we consider that we have effectively addressed each of those points in our initial reply (some relevant elements are also included in our reply to other reviewers); we are not going to provide a point by point reply. Please note that, as specified in our initial reply, we have considerably reworked the 4th and 5th paragraphs of the "Introduction" in order to address comments by several reviewers, including Reviewer #2.
