

Interactive comment on “Physical and chemical characterizations of biochars derived from different agricultural residues” by K. Jindo et al.

Anonymous Referee #1

Received and published: 7 August 2014

The ms. dealing with "Physical and chemical characterizations of biochars derived from different agricultural residues" is clear, well organised and written. For the future work, we suggest the authors to compare and discuss these results with those of standard of humic substances (humic acids, mainly) supplied by the IHSS (International Humic Substance Society).
