

Interactive comment on “New highlights on phytolith structure and occluded carbon location: 3-D X-ray microscopy and NanoSIMS results” by A. Alexandre et al.

Anonymous Referee #2

Received and published: 6 November 2014

Considering my special expertise as a materials scientist I highly appreciate the experimental work shown in the paper. I mean that the discussion has been done in a balanced way but can not really estimate if the related work has been completely considered.

One remark: The reference Laue et al. is 2006, sometimes cited as 2007. Hopefully there are not still more such inaccuracies.
