

## ***Interactive comment on “Soil organic carbon in the Sanjiang Plain of China: storage, distribution and controlling factors” by D. Mao et al.***

**Anonymous Referee #1**

Received and published: 8 November 2014

Manuscript Number: bgd-11-14765-2014 Title: Soil organic carbon in the Sanjiang Plain of China: storage, distribution and controlling factors.

Comment: The MS deals with an interesting issue for soil organic carbon change at the Sanjiang Plain of China. I think this article has the potential to be an interesting addition to the literature. But still needs improve huge. My comments as follow: 1 I think most readers do not know the site of “Sanjiang Plain”, I suggest you added some sentences to explain of it in introduction. For example, The Sanjiang Plain includes the Amur River (also known as the Heilong, or literally, "Black Dragon" or River), Songhua and Ussuri (also known as the Wusuli) rivers and covers 23 counties in Heilongjiang Province, China encompassing about 109,000 km<sup>2</sup>. The area has extensive wetlands (Wang et al. 2003). (1) Wang A., Zhang S., and Zhang B. A study

on the change of spatial pattern of wetland in the Sanjiang Plain. *Acta Ecologica Sinica* 2003, 23(2):237-243). 2 “Land SOC change is a global environmental problem with important political and socioeconomic ramifications. These ramifications result from complex combinations of several factors, including natural factors such as ecological and climatic variations, and anthropogenic factors such as human activities and restoration policies that lead to changes in vegetation cover (Cao et al., 2011, 2014). Given these complexities, finding solutions that are both equitable and ecologically effective is even more challenging (Wang et al. 2011)”. I believe your topic is interest. However, you should make the readers to know the Significance of your research. Please download the follow references and improve your introduction and discussion. Socioeconomic Road in Ecological Restoration in China. *Environmental Science and Technology*, 2010, 44 (14), 5328–5329 3 In my opinion, the discussion structure should different from results section and focus on the mechanism (the relation between your data and why you find different result from others’). Therefore, there are some work wait you do again. And some policy suggestion seems should be give.
