V. Sanial, I am pleased to see that you have received three constructive and positive reviews of your paper recommending only minor changes, and that you have considered and appropriately responded to their concerns. I encourage you to now prepare and submit your revised paper. In doing so, I have one minor request: please consider whether Reviewer 2 might have intended to refer to an upstream plateau further away than the LeClaire rise, such as the region around Crozet and whether the transport time from such a feature in this fast flowing northerly portion of the ACC could allow transport from so far away, and cite appropriately other work on Ra isotopes near the Crozet plateau. sincerely, T. Trull
