

Interactive comment on “Oceanic N₂O emissions in the 21st century” by J. Martinez-Rey et al.

Anonymous Referee #2

Received and published: 16 January 2015

In the 3d specific comment of my review, I stated that the IPSL model projects a NPP decline that is among the largest among CMIP5 models. This is not true, as the NPP decline is right in between other models (figure 4 in Bopp et al., 2013 BGS). What I should have referred to is the decline in Export Production, which is indeed among the largest, and which is what really matter for subsurface nitrification and N₂O production. The reference to Fig. 9 in Bopp et al., 2013 (BGS) is accurate. I apologize for any source of confusion.
