

Referee report on *Nonlinear thermal and moisture dynamics of high Arctic wetland polygons following permafrost disturbance*, by E. Godin, D. Fortier, and E. Lévesque

The authors carefully read the comments of the reviewers and thoroughly considered the suggestions. They modified the paper accordingly both text and figures, and inserted new tables.

The authors not only inserted the clarifications requested by the reviewers, but they also rewrote entirely some paragraphs, greatly improving the readability of the paper and the clarity of the message.

I recommend this paper for publication.
