Received and published: 7 April 2015

COMMENT: Anonymous Referee #1 Received and published: 12 February 2015 "The research implemented a very unique N₂O sampling network consisting of 147 sampling locations on a single field of 4 ha of tea. This level of sampling requires an extraordinary efforts, and the data so obtained are of unique value for evaluating spatial variability of N₂O emissions from agricultural soils. The manuscript is worth publishing."

RESPONSE: We highly appreciated the encouragement made by the referee #1.
