Please note that we have recently published a paper comparing global response of phytoplankton over the 21st century in the entire suite of CMIP5 models (<http://link.springer.com/article/10.1007/s00382-014-2374-3>). We have discussed the primary production responses across models on a biome by biome basis and have found many of the same patterns. It would be interesting to discuss how your new results fit our earlier findings.
