Interactive comment on "Predictors and mechanisms of the drought-influenced mortality of tree species along the isohydric to anisohydric continuum in a decade-long study of a central US temperate forest" *by* L. Gu et al.

L. Gu et al.

lianhong-gu@ornl.gov

Received and published: 17 April 2015

Please see the supplement for our response. Because similar issues are discussed, we have combined our response to all three referees into a single file. Please note that the Author Point 1, 2 and 3 stated in the Response to Referee #1 are relevant to our response to all three referees.

Great review. Much appreciation from all authors.

Lianhong Gu
