

Interactive comment on “Impact of seawater carbonate chemistry on the calcification of marine bivalves” by J. Thomsen et al.

J. Thomsen et al.

jthomsen@geomar.de

Received and published: 8 May 2015

We thank Dorrit Jacob for her comment which highlighted the complex mechanisms of calcification and criticized the simplification of underlying physiological processes in the first manuscript version. In the revised version, we discuss the controversy of calcification principles e.g. involvement of haemocytes in more details.
