

Interactive comment on “Annual litterfall dynamics and nutrient deposition depending on elevation and land use at Mt. Kilimanjaro” by J. Becker et al.

Anonymous Referee #2

Received and published: 19 August 2015

Dear Authors,

I carefully checked your comments and explanations to my requests. I totally agree with your responses and additional information in revised version, except a response to my question “*p.10034, l.23: Why did you choose this slope? At least, please describe general outline of the unique field, Mt. Kilimanjaro and the feature of SW slope.”

I understood why you choose the SW slope by your detail explanation, and/thus I suppose that you'd had better to add such the useful information to this section.

As for Ref. #2, I'd like to accept this article after you respond to above-mentioned points.
