Received and published: 31 August 2015

Short Comment: Please note that we have recently published a paper comparing global response of phytoplankton over the 21st century in the entire suite of CMIP5 models (<http://link.springer.com/article/10.1007/s00382-014-2374-3>). We have discussed the primary production responses across models on a biome by biome basis and have found many of the same patterns. It would be interesting to discuss how your new results fit our earlier findings

Author Response: Dear Anna Cabre, thank you for contributing to this manuscript! Due to the length of the paper and the request of all reviewers to shorten it, we could not discuss the differences between your and our results in great length, but we have
