Dear Editor,

We thank you and the referees for all provided comments, which helped us to further improve the quality of the manuscript. We carefully considered all of the suggestions and – with the exception of changing the title - revised the manuscript accordingly in all cases. We hope that it will now be considered adequate for publication in Biogeosciences.

Attached as a supplement pdf please find a point-by-point reply to the issues addressed in the two reviews. A marked-up copy and a clear copy of the manuscript as well as the according figures are attached as supplement pdfs in previous author comments.

C4962

Sincerely, Alexander Röhl
