Dear Editor, We the authors would like to thank the anonymous Referee #2 for the critical and valuable review of our manuscript “Evaluating sensitivity of silicate mineral dissolution rates to physical weathering using a soil evolution model (SoilGen2.25)”. We have gone through all the comments and taken into account most of the suggestions. We have replied to each of the comments (see supplement pdf file below) and some of the suggestions/corrections will be made to the revised manuscript. We hope that our responses and the revised manuscript will address some of the issues that seemed unclear.
