

Interactive comment on “Projected decreases in future marine export production: the role of the carbon flux through the upper ocean ecosystem” by C. Laufkötter et al.

K. Kvale

k.kvale@unsw.edu.au

Received and published: 16 December 2015

I would like to commend the authors for a thorough examination of a subject/model comparison that is overdue, and also to point them to a recent publication: Kvale et al. (2015) Environmental Research Letters DOI 10.1088/1748-9326/10/7/074009. This reference discusses the role of calcite particle export and ballasting in NPP and export production in the UVic ESCM using RCP 8.5 forcing.
