

Interactive comment on “Photochemical mineralisation in a humic boreal lake: temporal variability and contribution to carbon dioxide production” by M. M. Groeneveld et al.

M. M. Groeneveld et al.

marloes.groeneveld@ebc.uu.se

Received and published: 1 February 2016

Included is the new Figure 5 showing box plots of total measured CO₂ emissions, and minimum and maximum simulated photochemical DIC production, as mentioned in the reply to the referees comment.

Interactive comment on Biogeosciences Discuss., 12, 17125, 2015.

C9511

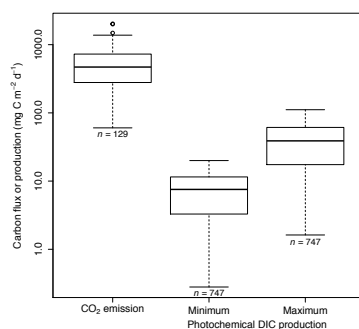

Figure 5. Box-and-whiskers plots of total measured CO₂ emissions, and minimum and maximum simulated photochemical DIC production, showing the median and 1st and 3rd quartiles with the whiskers set at ± 1.5 times the interquartile range and data outside this range given as circles. Note the log scale on the y-axis.
