

## ***Interactive comment on “Photochemical mineralisation in a humic boreal lake: temporal variability and contribution to carbon dioxide production” by M. M. Groeneveld et al.***

**M. M. Groeneveld et al.**

marloes.groeneveld@ebc.uu.se

Received and published: 1 February 2016

Included is the new Figure 5 showing box plots of total measured CO<sub>2</sub> emissions, and minimum and maximum simulated photochemical DIC production, as mentioned in the reply to the referees comment.

Discussion Paper

**Figure 5.** Box-and-whiskers plots of total measured CO<sub>2</sub> emissions, and minimum and maximum simulated photochemical DIC production, showing the median and 1<sup>st</sup> and 3<sup>rd</sup> quartiles with the whiskers set at  $\pm 1.5$  times the interquartile range and data outside this range given as circles. Note the log scale on the y-axis.

Fig. 1.
