

***Interactive comment on “Atmospheric concentrations of carbon dioxide and its isotopic composition in southern Poland: comparison of high-altitude mountain site and a near-by urban environment” by L. Chmura et al.***

**L. Chmura et al.**

Received and published: 28 February 2006

Referee #1 as underlined the statements already mentioned by the referee #2. Authors of the paper discussed that problems and decide to revise the paper completely aiming it on description of chromatography data obtained in Kraków and at Kasprowy Wierch. This two sites can be compared concerning CO<sub>2</sub> and CH<sub>4</sub> concentration variability. In our opinion it can fulfill BGD requirements for publication. Isotope data (particularly C-14) will be published separately with appropriate discussion.
