

Interactive comment on “Nitrogen load and forest type determine the soil emission of nitrogen oxides (NO and N₂O)” by K. Pilegaard et al.

K. Pilegaard et al.

Received and published: 11 October 2006

We acknowledge the kind comments of the referee, who finds that “the paper presents a host of useful data” and that “those who are more interested in lumped data will find the paper helpful”.

Details: In the revised paper we will change “year” to “a” as suggested.

We agree that Fig. 6 is not strictly needed and we will remove it from the revised version together with the reference in the text.

We will improve the text to point out more clearly which single site data supports which finding and highlight more clearly which findings are n
