The development of stable calcium isotopes as a proxy for sea water temperature is an ongoing topic and only a few groups in the world are active in this field. The few papers that have been published to date demonstrate that some basic issues are still in the dark. In my view, the current paper is a great contribution in shedding light on some of the unknowns. I like to thank the reviewers for their thoughtful referee reports and would like to ask the authors to respond to the issues raised and prepare a revised manuscript for submission to BG. The anonymous reviewer spent a considerable amount of time replotting the data and raising critical questions. Addressing these, and
