Interactive comment on “Stable isotopes as ecological tracers: an efficient method for assessing the contribution of multiple sources to mixtures” by M. N. Bugalho et al.

M. N. Bugalho et al.

Received and published: 26 July 2008

We thank the insightful comments of G.Osack and Pete Eldrige on the comparison of our model with a Bayesian-mixing model which, instead of classifying sources, estimates the probability distribution for the proportional source contributions to a consumer. We will fully address this issue in the discussion by quoting Moore et al. (2008) paper.
