

Interactive comment on “Anthropogenic CO₂ emissions in Africa” by J. G. Canadell et al.

Anonymous Referee #2

Received and published: 7 December 2008

This paper is a useful contribution to the study of quantifying anthropogenic CO₂ emissions at regional scales. As a continent dominated by developing countries, Africa was given little emphasizes in the work on the quantification of anthropogenic CO₂ emissions. This study makes an important contribution in filling this gap. I only have several minor comments.

- 1) P4399 L14 the reference of 'Raupach et al (2007)' is missing.
- 2) P4399 L17 Briefly describe the 'C tracking model' before discuss its update.
- 3) P4402 L2-4 This paragraph should be moved to the caption of Figure 3.
- 4) P4402 L5 '3.1.1' should be '3.2'
- 5) P4404 L4 'Fig.6' as referred in the text is missing.

6) Fig. 1: The author might want to extend the x axis instead of putting a number of '110.1' for South Africa, which is a little bit confusing.
