***Interactive comment on “A mathematical  
modelling of bloom of the coccolithophore  
*Emiliana huxleyi* in a mesocosm experiment” by  
P. Joassin et al.***

**P. Joassin et al.**

Received and published: 20 May 2008

Dear reviewers,

Could you please consider this important notice concerning the initially posted replies for your related comments about the submitted manuscript? Our replies actually consist in preliminary replies and required to be completed. The reason resides in the fact that many of our co-authors are still presently away from their mail and not contactable due to their spring scientific sea campaigns. In order to avoid imposing an excessive delay before sending final replies, we took the option to propose these preliminary responses. Our final replies as well as the modified manuscript will be posted by the end of May. We do apologise for this annoyance.
