

## ***Interactive comment on “Forest Floor Carbon Exchange of a Boreal Black Spruce Forest in Eastern Canada” by O. Bergeron et al.***

**Anonymous Referee #2**

Received and published: 30 July 2009

General comments from Reviewer 2 on the manuscript:

Forest Floor Carbon Exchange of a Boreal Black Spruce Forest in Eastern Canada

O. Bergeron, H.A. Margoils and C. Coursolle

In general the work presented is very interesting and very relevant within the scope of Biogeosciences. The structure of the manuscript is very good, excellent language and the methods applied seem acceptable. Figures and tables are adequate and summary is concise. The only thing I would like to point out is that some of the references might be out of date and some more recent might exist. Otherwise I do not have many specific comments as can be seen in the attached manuscript.

To my opinion the manuscript is acceptable for publication in Biogeosciences.

C1387
