Thank you Marion ... helpful (of course!).

As per Christoph's comments – I accept that the 'recommendation' aspect needs toning down, and more discussion of shortcomings of our proposed approach should be included. Both of which I (we) am happy to do. I have no particular problem with following your more specific suggestions and adding additional clarification and alterations were appropriate.

I will re-double my efforts to try and have something of a full reply to your comments and suggestions before the close of 'open discussion'.
