Dear Dr. Weinbauer,

We now have three reviews of your manuscript. All reviewers truly appreciate your detailed study on the trophic balance at the study site. However, they also raise a number of points that must be addressed in a revision. In particular, the unit issues raised by all reviewers need to be clarified. The revised manuscript will probably be acceptable, provided that you take into account the points brought forward by the reviewers.

C1394

We look forward to receiving your revised manuscript, along with a detailed response to each of the reviewers' comments and concerns.

Thank you again for choosing the journal Biogeosciences.

Best wishes,

Koji Suzuki
