Dear Dr. Collins,

We now have two reviews of your manuscript. The two anonymous reviewers truly appreciate your interesting discussion on experimental microbial evolution. However, they also raise several points that must be addressed in a revision. The revised manuscript will probably be acceptable, provided that you take into account the points brought forward by the reviewers.

We look forward to receiving your revised manuscript, along with a detailed response to each of the reviewers' comments and concerns.

C1416

Best wishes,

Koji Suzuki
