Dear Referee,

First I would like to thank you for your comments!

I can answer the second and first comments. With regards to the first comment, I forwarded it to the second author, and I will reply as soon as possible.

The repetition in line 19 of page 11, "the slope between the log reflectance and the log resolution" was made so that it would be easier for people to understand which slope we refer to.

In the text of the Table 1, it is said that "Ref represents reflectance values in nm." We should of written that the wavelengths are in nm and the reflectance is in percentage units.

Thank you again, for your comments!

Tali Neta
