Received and published: 14 September 2010

The authors would like to thank Dr. Schwab for her helpful and constructive review. Given here is a reply to the comments which have been made. As with Referee #1, there is a request for more correlation with other Mediterranean records. Please see response to referee 1. Specific and Technical Comments. The vast majority of the grammatical and typological errors were commented on by Referee#1, and these have been dealt with. Abstract – checked by the authors. Introduction – a few sentences have been added as this was also requested by Referee #1. Materials and Methods

C2920

– corrected. Chronology – see response to Referee 1. Results – corrected where appropriate. Discussion – Belmecheri et al (2009) confirms that the good preservation of the authigenic calcite, so retained.
