Received and published: 1 April 2011

Dear authors

Thank you for the submission of your manuscript, which has been reviewed in the Interactive Public Discussion by two experts. Although your topic is of interest especially in the context of expecting climate change, both referees raised some critical points regarding your experimental design and data analyses. Especially referee 2 raised some serious concerns over the effect of freeze drying on the soil phosphorous.

Thus, you should seriously consider if you can meet these concerns in your interactive comment prior to submission of a revised version.

You will appreciate my need to be highly selective of the papers accepted, given the  
C5295

ever increasing rate of submission to this journal.

Kirsten Küsel
